## Notes

All data is based on film applied to 3mm clear float glass. Performance results are subject to variation within industry standards and are only intended for estimating purposes. There may be restrictions concerning the suitability of this product to certain glazing types. It is the users responsibility to ensure the product is suitable for the intended use. For more details please contact us.

## Installation

Should be undertaken by professional window film installers. As per manufacturers instructions, film can only be applied in temperature of +5C. For best results, a clean and dust free area environment should be provided.

## Drying

The curing period of the adhesive to the window often causes a slightly misty appearance. This is normal and will clear in a short period of time (usually around 7 - 20 days) depending on the thickness of the film.

In very cold weather the curing process may take longer and the mistiness more pronounced. Nevertheless the film will clear to provide perfect clarity.

Film can take up to 14 days to cure/dry.

Dark Neutral

## Description

A Dark Neutral or tinted film adds a subtle grey or steel appearance to glazing. Extremely effective reduction in heat gain and glare that preserves the natural view through the glass. This range of tinting window film provides a natural grey appearance, inside and out.

This product carries a full 10 years manufacturer's warranty when professionally installed
